The **Hampton** combines luxury with support through its 'nested' Revolution core and lightweight titanium alloy springs. As well as HD Airflow springs, it has 16 air vents to increase the breathability of the mattress. What's more, you can tailor your sleeping surface to the changing seasons with our Warm Side / Cool Side technology. A rich blend of cashmere and wool, secured with woollen tufts to the spring unit, creates a sleeping environment that combines luxurious comfort with supportive stability. Choose from gently supportive, medium support or firm support.
